

@config — model split

Appears in: **DL-07**

config.example.py:8-9

"The split lives in config as OLLAMA_MODEL and OLLAMA_FAST_MODEL, and each agent imports the constant it needs." ... "One-line config swap: pass — OLLAMA_MODEL / OLLAMA_FAST_MODEL in config."

@config — model split

config.example.py:8-9

```
8 OLLAMA_MODEL          = "gemma4:e2b"    # creative tasks: copywriter only
9 OLLAMA_FAST_MODEL     = "mistral:7b"    # structured JSON tasks: audience, CTA, assistant
```

What it shows: The split as two constants — swapping either model is a one-line change with no code edit.
