

@config — stack split

Appears in: [DL-01](#)

config.example.py:4-9

"The split was the only configuration left, and it landed total pipeline time at 60–90 seconds with no billing set up (@config)."

@config — stack split

config.example.py:4-9

```
4 OPENROUTER_API_KEY = "your-openrouter-api-key-here"
5 OPENROUTER_MODEL = "nvidia/nemotron-nano-12b-v2-v1:free"
6 OPENROUTER_FALLBACK_MODEL = "meta-llama/llama-3.2-11b-vision-instruct:free"
7 OLLAMA_URL = "http://localhost:11434"
8 OLLAMA_MODEL = "gemma4:e2b" # creative tasks: copywriter only
9 OLLAMA_FAST_MODEL = "mistral:7b" # structured JSON tasks: audience, CTA, assistant
```

What it shows: The model stack: OpenRouter free tier for vision only, Ollama for all text. The split that makes the pipeline run for free on a developer laptop.
