

@copywriter — two variants

Appears in: [DL-02](#)

agents/copywriter.py:6-69

"The copywriter receives the full audience output and the description, but never the raw vision JSON (@agent-contracts)." ... "The copywriter received a pre-built persona instead of raw tags — one job instead of four."

@copywriter — two variants

```
agents/copywriter.py:6-69

6  def generate(description: str, vision_data: dict, color_data: dict,
7      tone: str, audience_data: dict, doc_context: list = None) -> dict:
8      """Generate two distinct ad copy variants using Ollama."""
9      try:
10         persona_label = audience_data.get("persona_label", "General audience")
11         age_range = audience_data.get("age_range", "18-35")
12         interests = ", ".join(audience_data.get("interests", []))
13
14         system_prompt = (
15             "You are a social media ad copywriter. "
16             f"Target audience: {persona_label} (age {age_range}), interested in {interests}. "
17             "Create two distinct ad copy variants. "
18             "Variant 1 must open with an emotional hook (feeling, aspiration, or identity). "
19             "Variant 2 must open with a concrete product benefit or feature. "
20             "Each variant must be under 150 characters and include a clear CTA. "
21             "Respond with ONLY a valid JSON object – no markdown, no explanation. "
22             "Required keys: variant_1 (str), variant_2 (str). "
23         )
24
25         attrs = ", ".join(vision_data.get("product_tags", []))
26         hashtags = " ".join(vision_data.get("suggested_hashtags", []))
27         user_prompt = (
28             f"Product description: {description}\n"
29             f"Visual attributes: {attrs}\n"
30             f"Dominant color: {color_data.get('dominant', '')}\n"
31             f"Mood: {vision_data.get('mood', '')}\n"
32             f"Tone: {tone}\n"
33             f"Suggested hashtags: {hashtags}"
34         )
35
36         if doc_context:
37             context_block = "\n\nBrand/product reference material (use as creative context):\n"
38             context_block += "\n\n".join(f"[{i+1}] {chunk}" for i, chunk in enumerate(doc_context))
39             user_prompt += context_block
40
41         payload = {
42             "model": OLLAMA_MODEL,
43             "stream": False,
44             "messages": [
45                 {"role": "system", "content": system_prompt},
46                 {"role": "user", "content": user_prompt},
47             ],
48         }
49
50         resp = requests.post(
51             f"{OLLAMA_URL}/api/chat",
52             json=payload,
53             timeout=120,
54         )
55         resp.raise_for_status()
56         content = resp.json()["message"]["content"].strip()
57
58         if content.startswith("```"):
59             content = content.split("```")[1]
60             if content.startswith("json"):
61                 content = content[4:]
62         return json.loads(content.strip())
63
64     except Exception as e:
65         return {
66             "variant_1": "Check out this amazing product! Shop now. #trending",
67             "variant_2": "You need this in your life. Get yours today! #viral",
68             "error": str(e),
69         }
```

What it shows: Specialist #3: takes the pre-built persona and writes two structurally distinct variants (variant_1 = emotional hook, variant_2 = product benefit) — one narrow job.
