

@assistant — model import

Appears in: [DL-07](#)

agents/assistant.py:3

footnote ¹ — "...and are used by @copywriter, @audience, and @assistant."

@assistant — model import

agents/assistant.py:3-3

```
3 from config import OLLAMA_URL, OLLAMA_FAST_MODEL as OLLAMA_MODEL
```

What it shows: The router/assistant runs on mistral:7b — the schema-reliable side of the split, since routing depends on valid JSON.
