

@config — vision models

Appears in: **DL-03**

config.example.py:5-6

"A two-model fallback chain: nemotron-nano-12b-v2-vl:free primary, llama-3.2-11b-vision-instruct:free fallback."

@config — vision models

config.example.py:5-6

```
5 OPENROUTER_MODEL = "nvidia/nemotron-nano-12b-v2-vl:free"
6 OPENROUTER_FALLBACK_MODEL = "meta-llama/llama-3.2-11b-vision-instruct:free"
```

What it shows: The exact primary and fallback vision model identifiers the chain in `vision.py` reads.
