

@setup

Appears in: **DL-07**

scripts/setup.py:11-15, 54-57

"gemma4:e2b is pulled before the server starts. setup.py handles this; if the model is missing, the copywriter returns an error dict rather than crashing."

@setup

scripts/setup.py:11-15

```
11 OLLAMA_MODELS = [  
12     "gemma4:e2b",      # creative copywriter  
13     "mistral:7b",      # structured JSON tasks  
14     "nomic-embed-text", # RAG embeddings  
15 ]
```

...

scripts/setup.py:54-57

```
54     # 3. Ollama model pull  
55     print("\n[setup] Pulling Ollama models (this may take a few minutes on first run)...")  
56     for model in OLLAMA_MODELS:  
57         run(f"ollama pull {model}", f"Pulling {model}")
```

What it shows: The setup script pulls both split models plus the embedding model, so the creative model is present before first run. (The matching startup guard is `_check_models_on_startup` in `app.py:49-61`.)
