

@vision — output schema

Appears in: [DL-03](#)

[agents/vision.py:14-26](#)

"Redesign the output schema from visual attributes to buyer signals — target_signals is the key field, not colours or materials." ... "target_signals — 'eco-conscious', 'fitness enthusiast', 'outdoor lifestyle' — hands it the product already in buyer-identity language."

@vision — output schema

[agents/vision.py:14-26](#)

```
14         "role": "system",
15         "content": (
16             "You are a product analyst specializing in consumer goods and digital marketing. "
17             "Analyze the product in the image and extract structured tags that will be used "
18             "to derive a target audience persona. "
19             "Respond with ONLY a valid JSON object – no markdown, no explanation. "
20             "Required keys: "
21             "product_type (str), "
22             "product_tags (list of str – specific attributes like materials, use-case, lifestyle fit), "
23             "mood (str – e.g. energetic, calm, luxurious, playful), "
24             "target_signals (list of str – cues about who buys this, e.g. 'fitness enthusiast', 'eco-conscious', 'budget shopper'), "
25             "suggested_hashtags (list of str)."
26         ),
```

What it shows: The redesigned schema — buyer signals, not visual attributes — that the audience agent consumes first.
