

Requirements—3

1. Functional requirements (POC) with acceptance criteria

- FR1 Input
 - Must accept image (jpg/png/webp ≤5MB) and a 15–40 word description.
 - Accept theme preset or default from category.
 - Acceptances: invalid files rejected with clear message; description length validated.
- FR2 Vision tagging
 - Must produce at least: category, 3–7 tags (materials/colors/context), confidence per tag.
 - Acceptance: for a clear product photo, returns category with ≥0.6 confidence; else asks user for one clarifying tag.
- FR3 Theme selection
 - Must select a theme automatically or via user override and expose theme parameters to later steps.
 - Acceptance: theme metadata present in output; tone/lexicon reflected in copy.
- FR4 Campaign generation (Meta)
 - Must output 2 ad variants: primary text ≤125 chars, headline ≤40 chars, description ≤30 chars, CTA from theme.
 - Acceptance: character limits met; both angles distinct; lexicon applied.
- FR6 Landing page skeleton
 - Must output H1, subhead, 3 benefit bullets, trust microcopy (shipping/returns placeholders), and alt text for the image.
 - Acceptance: bullets outcome-led, no invented prices/warranty; alt text ≤125 chars, factual.

- FR7 Guardrails
 - Must remove or flag prices/discounts/guarantees unless provided in input; block medical/financial claims.
 - Acceptance: output has placeholders like “[price]” if not provided; risky phrases flagged in JSON.
- FR8 Output formatting
 - Must export a single JSON object containing all components and a parallel text summary.
 - Acceptance: JSON validates against the POC schema; all components present or explicitly omitted.
- FR9 Regeneration
 - Must allow switching theme or channel and regenerating content.
 - Acceptance: outputs reflect new theme/channel; constraints still met.
- FR10 Evaluation
 - Must compute per-field character counts and a lexicon adherence score (0–100).
 - Acceptance: counts included; adherence ≥ 70 for preferred words and 0 presence of avoided words (or flagged).

1. Business requirements (POC-level)

- BR1 Produce a usable, policy-safe mini-campaign from one image + description.
- BR2 Maintain internal thematic consistency across outputs.
- BR3 Avoid fabricating facts; use placeholders where facts are missing.
- BR4 Provide both JSON output and a readable textual summary for grading/demo.

1. User stories with acceptance criteria (POC)

- US-1 As a student marketer, I provide an image and short description and receive two Meta ad variants in a consistent theme.

- Acceptance: 2 variants; char limits met; theme lexicon present; JSON and text returned.
- US-2 As a user, I change the theme and regenerate to see the same campaign rewritten in a new voice.
 - Acceptance: tone/lexicon change is evident across all components; constraints still met.
- US-3 As a user, I receive hooks, captions, and a storyboard.
 - Acceptance: hooks, captions, 3–5 shot ideas present; ≤100 char captions.
- US-4 As a user, I see warnings when the tool removes risky claims or replaces missing facts with placeholders.
 - Acceptance: JSON compliance_flags populated with clear reason codes and snippets.
- US-5 As a grader, I can validate the output against the schema and see character counts and adherence scores.
 - Acceptance: schema validation passes; counts and scores present.
